

# NEUROFLEETX AI-DRIVEN URBAN MOBILITY OPTIMIZATION

# INTRODUCTION

- Managing vehicles and drivers manually is **hard and time-consuming**

## Problems:

- Hard to know vehicle status
- Delays in deliveries
- Maintenance schedules are missed
- Goal:** Make fleet management **organized and simple**

## WHAT IS *NEUROFLEETX* ?

A basic fleet management system for students or small organizations

### *Features:*

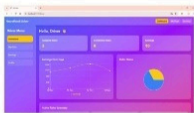

- Track vehicles, drivers, and customers
- Maintain schedules
- Record vehicle and delivery details
- Send basic alerts (like maintenance due)

# SYSTEM OVERVIEW

## Vehicle Management:

Add, remove, or update vehicle info

## Customer Management:

Add, update, and track customer info

## Driver Management:

Keep track of drivers

## **TECHNOLOGY USED**

- Backend: Spring Boot
- Frontend: React + Tailwind CSS
- Database: MySQL (or in-memory for testing)
- Other Tools: Postman for testing APIs

## BENEFITS

- Organizes vehicle, driver, and customer info in one place
- Keeps track of maintenance easily
- Helps plan schedules efficiently
- Reduces errors in manual tracking
- Future Scope:** Mobile app, notifications for maintenance and deliveries
